E = Young's modulus

ρ = Density

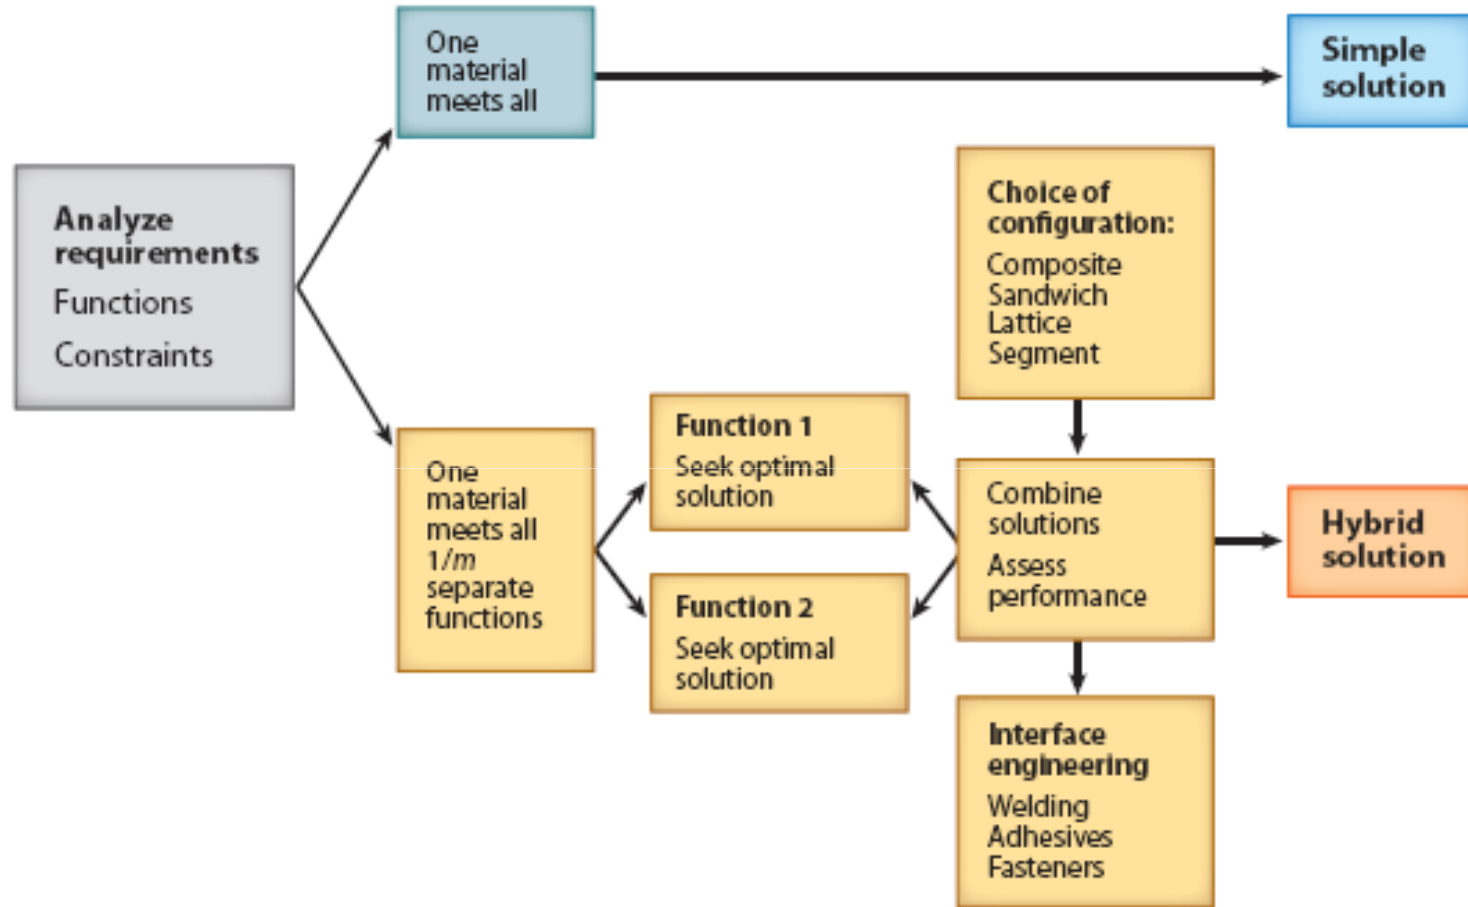

σ_y = Yield strength

Ashby's performance indexes are the best way to translate a problem of superstructure to a problem of material

Functions and materials

ArcelorMittal

**Scale, hybridation
and architected solutions:
Analysis of
Steel-Based Composites**

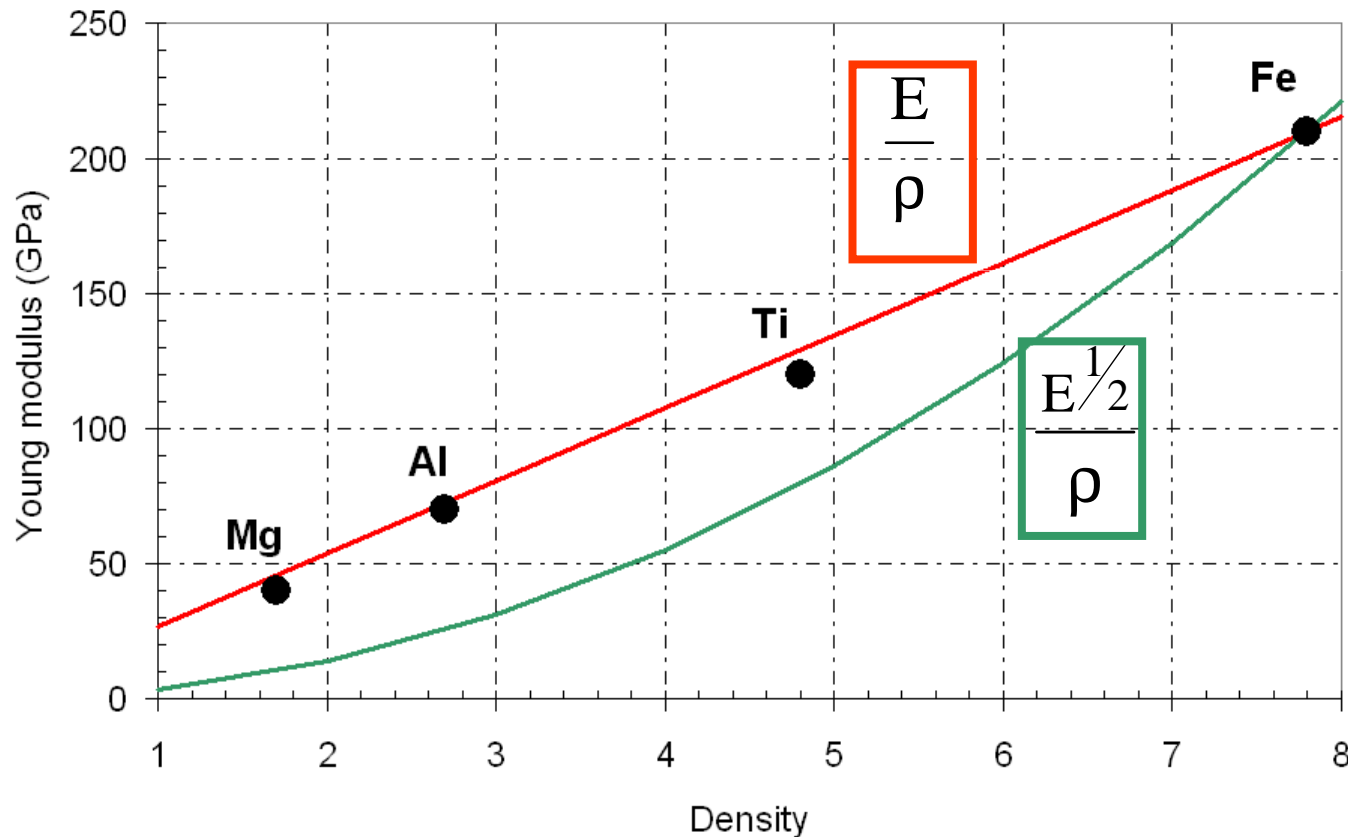

The main limitation for lightening with steel

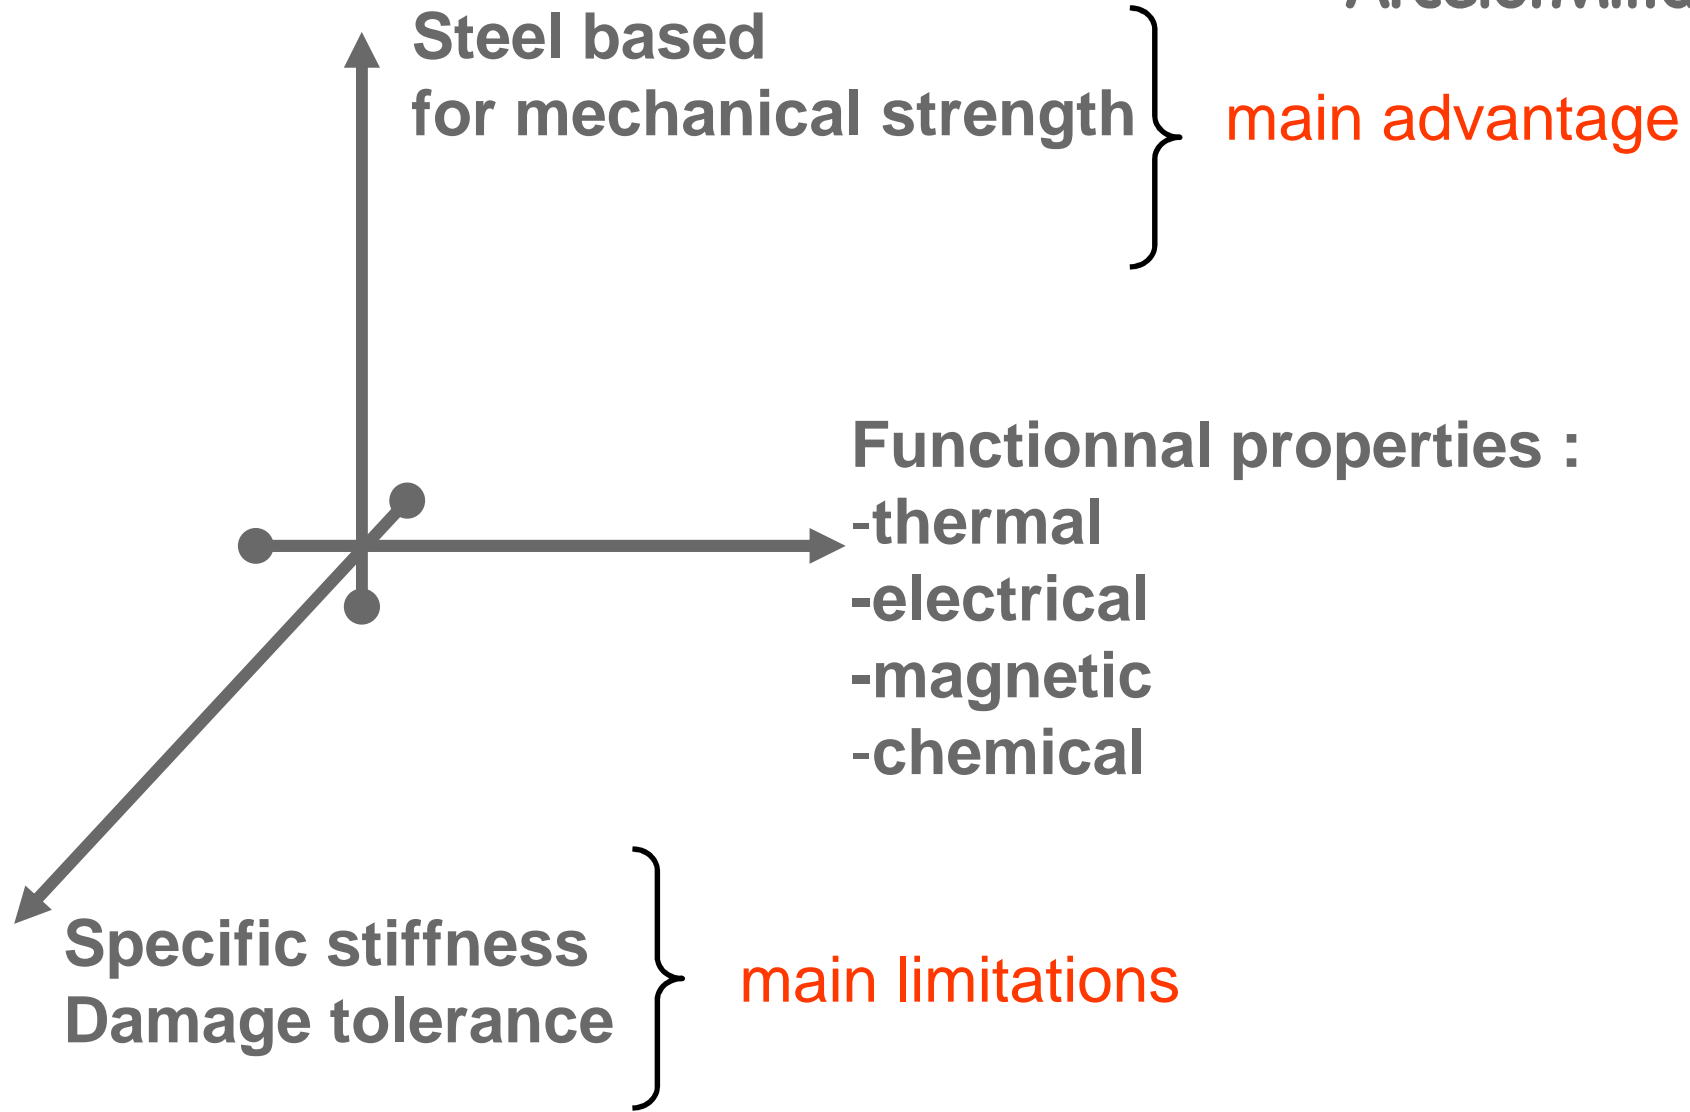

ArcelorMittal

- The performance of steel is very high concerning the strength especially including cost
- The situation for specific stiffness is a threat

Cannot be disclosed, used, or reproduced without prior written specific authorization of Arcelor
CONFIDENTIAL – Privileged Informa

Ultra-high strength
martensitic steel

HSLA steel

Pillar of a body in white for car industry made by laser welding of an HSLA (high-strength, low-alloy) steel with an ultra high-strength martensitic steel

Other examples

Cannot be disclosed, used, or reproduced without prior written specific authorization of Arcelor
CONFIDENTIAL – Privileged Information – Arcelor's proprietary information

hardness for piercing/corrosion

strength/conductivity

ArcelorMittal

Meso-composites

Automotive applications

- Objectives : strong weight saving by specific rigidity improvement with other functions as low thermal and phonic conductivity
- Ways : light core sandwich with steel strips

- Rigidity is improved by 30%

© 2007 – Arcelor – All rights reserved for all countries
Cannot be disclosed, used, or reproduced without prior written specific authorization of Arcelor
CONFIDENTIAL – Privileged Information – Arcelor's proprietary information

Other examples

ArcelorMittal

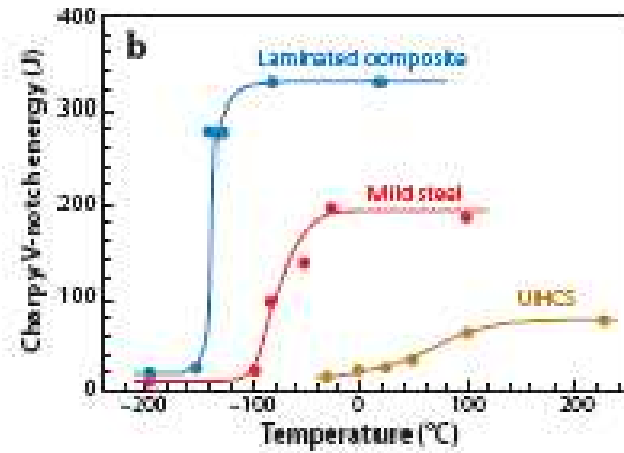

Steel/Aluminium high-voltage cable
=> strength/conductivity

Magnetic stainless : compatibility with all induction cooktops
Aluminium : heat conduction
Austenitic stainless steel : bio-compatibility

Toughness improvement

ArcelorMittal

**Example of a bridge between
manufacturing process
and architected materials**

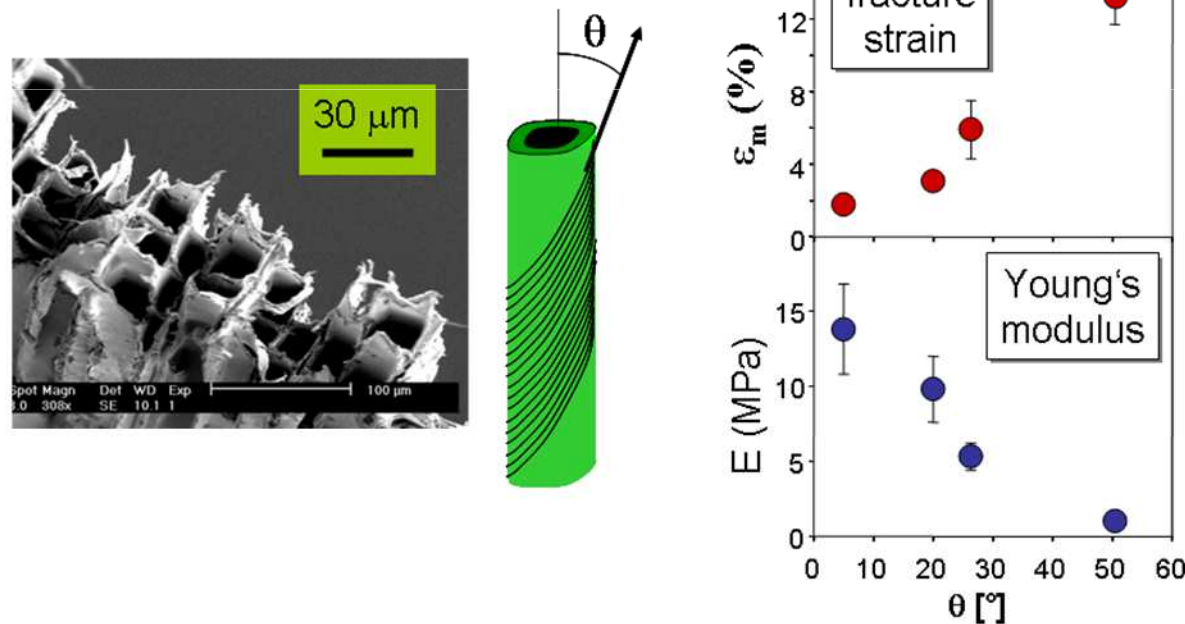

Stiffness, strength and stretchability of tubular structures (1)

ArcelorMittal

- Motivations

- One of the main challenge for architected materials is the manufacturing process
- Expectation for improved tubular solutions is very high

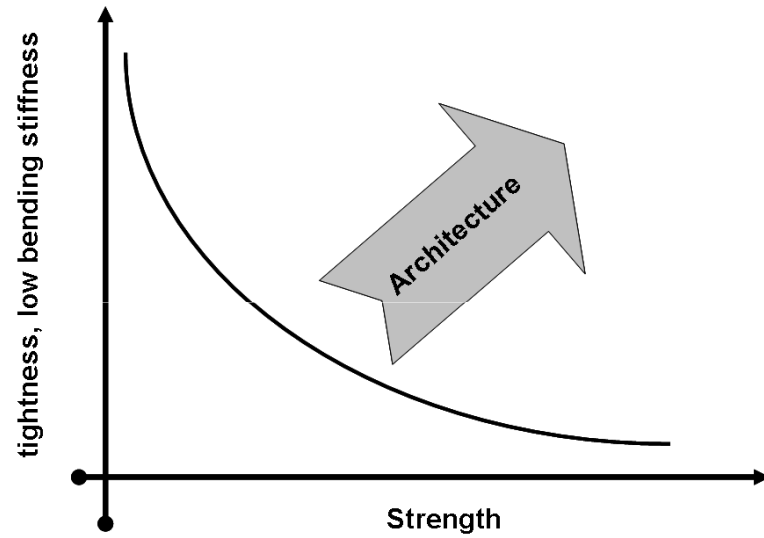

Response of Nature

Cannot be disclosed, used, or reproduced without prior written specific authorization of Arcelor
CONFIDENTIAL – Privileged Information – Arcelor's proprietary information

Analysis of functions

Response from Engineers

stretchability of tubular structures (3) : metal

Response from Engineers

- Only external helical architected reinforcements for metallic structure (wrapping)
- Is it possible to do developed internal helical architected reinforcement in a metallic structure with a reasonable process?

Exploitation of the SPD process of torsion-extrusion

ArcelorMittal

Step 556

ArcelorMittal

First real illustration

- High-Pressure Torsion is one of the most common SPD process for producing nanostructured metallic alloy (ultra-fine grain)
- HPT process can be extended for having a simultaneous architecturation and nanostructuration

(a) Four-piece HPT for Cu-Al6061 specimen (schematic).

(b) Initial four-piece Cu-Al6061 specimen prior to HPT test (left) and after a full turn of HPT anvil.

(b) Reconstructed 3D image of the HPT-processed four-piece Cu-Al6061 specimen after a full turn of HPT anvil.

(c) Distribution of the equivalent von Mises stress (in MPa) after a half-turn of HPT anvil (FEM simulation).

O. Bouaziz
2012 October

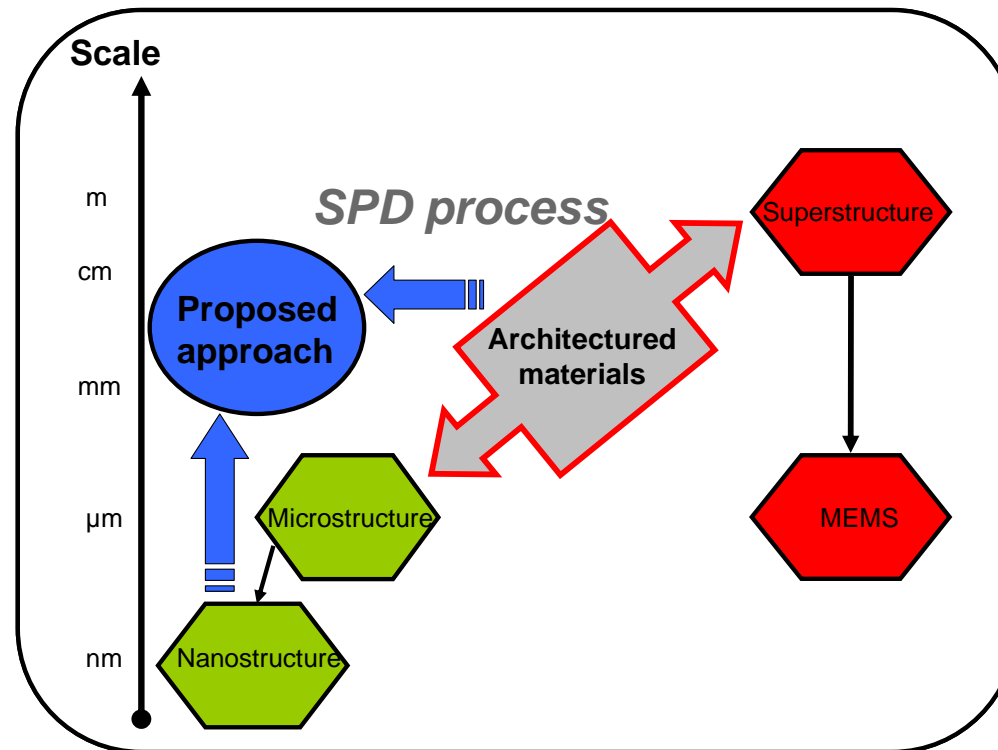

[O.Bouaziz, H.S. Kim, Y. Estrin, Adv. Eng. Mat., in press]

Example of bridges : process/architecture

ArcelorMittal

- A lot of processes to produce bulk nano-grained materials have been developed in the last 20 years based on Severe Plastic Deformation
- It is now possible to keep advantages avoiding limitations by including simultaneous architecturation

© 2007 – Arcelor – All rights reserved for all countries
Cannot be disclosed, used, or reproduced without prior written specific authorization of Arcelor

Conclusions and scientific challenges

ArcelorMittal

- The requirements analysis using tools as Ashby's indexes is a crucial step to know if it useful to propose an architected solution
- Challenge : Development of Ashby's indexes for combined solicitations (tension/bending/torsion...)
- Confusion between : hybrid, composite and architected materials have been highlighted : *mesoscopic composites seems to be generally architected*
- The manufacturing processes of architected materials have to be carefully investigated
- Challenge : Interface control in architected solutions
- Challenge : assembly of architected materials (welding, mechanical joining.....)

Conclusions : promotion of interactions

- **Transversal new field of research promoting collaboration between:**
 - **mechanic/materials Science**
 - **metallurgy/plasturgy**
 - **mstructural/functional materials**
 - **natural and engineered materials**
 - **industry/academy**
- **Attractive field for students**
- **A clear and surprising french leadership**

ArcelorMittal

Challenge : sustain the dynamic!!!

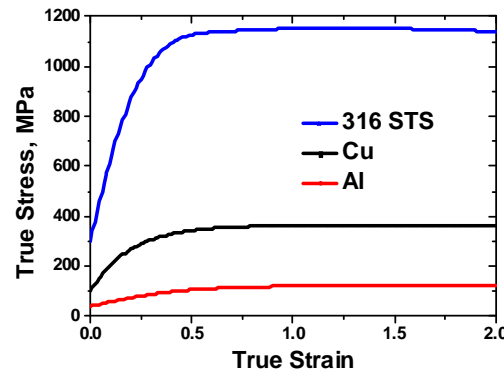

- **Dedicated events**
 - Symposium in MRS2009 (San Francisco, April 2009)
 - Session in JA2010 SF2M(Paris, June 2010)
 - Symposium Jacques Cartier (Lyon, Oct.2010)
 - First school « ARCHIMAT » (Autrans, May 2011)
 - Special issue Scripta Materialia (viewpoint set 2012)
 - New commission SF2M/MECAMAT (2011)
 - Symposium in JA2012 SF2M (Paris, oct. 2012)
- **Subsidied french projects**
 - CPR MAM (2008-2011)
 - ANR MANSART (2009-2012)
 - LABEX Grenoble (2012)
 - GIS Lyon-Grenoble
- **2nd « ARCHIMAT» school in Autrans (may, 2013)**
- **Other proposals for future are welcome**
